Rui C. Campos, PhD
Carlota Sacoto, MSc
Ana Marta Keong, MSc
Diana Junqueira, MSc

As part of the research relating personality and depression, this study seeks to predict depressive experiences in aging women according to Sidney Blatt's perspective based on the Five-Factor Model of Personality. The NEO-Five Factor Inventory and the Depressive Experiences Questionnaire were administered. The domains Neuroticism, Agreeableness, and Conscientiousness predicted self-criticism, explaining 68% of the variance; the domains Neuroticism and Extraversion predicted dependency, explaining 62% of the variance. The subfactors Neediness and Connectedness were differently related to personality traits. These findings are relevant to the research relating personality and anaclitic / introjective depressive experiences in late adulthood. (Bulletin of the Menninger Clinic, 77[3], 269–288)

Ms. Henriques-Calado, Dr. Duarte-Silva, Ms. Sacoto, Ms. Keong, and Ms. Junqueira are with the Faculty of Psychology, University of Lisbon, Portugal. Dr. Campos is with the Psychology Department, University of Évora, Portugal.

The authors want to thank all of the study participants. This work was supported by a doctoral grant from the Portuguese Foundation for Science and Technology (ref. SFRH/BD/44515/2008) awarded to the first author.
