

Portuguese Marbles in History of Architecture: News Perspectives

Authors
Carlos Filipe ; Armando Quintas
 CIDEHUS-UÉ | CECHAP (Portugal)

In this poster, we seek to disseminate a study in the field of Social and Human Sciences on the **Heritage and History of the Marble Industry (PHIM)**, with news approaches on the use of marbles in the identified architectural elements, in cities and towns of Portugal, in particular at Alentejo province.

Description and Goals

Research in the fields of History, (Industrial) Archaeology and Digital Humanities.

Scientific coordination of CIDEHUS-UÉ; IHC-UNL; ISCTE-IUL, ARTIS-FLUL.

Study of the ornamental stone industry, in particular the marble of Alentejo (Portugal), through, the processes of technical and technological evolution, social issues and the economic relation with the territory.

The research project has also sought to establish the relationship between the natural resource and the evolution of architecture and urbanism.
